ENGINEERED QUARTZ STONE

THE COMPANY

STONE.De GmbH with its brand names OBJECT STONE and TOP STONE holds the position as forerunner for efficient, innovative engineered quartz stone technology for several years.

Located centrally in Kassel, Germany which is almost the centre of Europe, STONE.De has a unique plant with administrative offices and showroom. The production area is over 6,000 m² in size and is equipped with the most modern Stone processing technology. With a grinding and cutting capacity of more than 1,000 m² per day slabs are calibrated, honed and split into tiles. Waterjet, NC-operated saws and machining centres, as well as a high performance sand blasting centre complete the mechanical equipment park.

MATERIAL

Quartz composite stone, called: "Engineered Stone", is a crystalline, quartz-hard material of natural origin and based on selected high-quality raw materials from global quartz quarries.

In accordance with a patented procedure, the raw materials are combined: compression, vacuum and vibration shorten the process of becoming a stone into just a few minutes.

Both basic and unconventional effect stones with new optics are created with the combination of fine and/or coarse quartz crystals, with insertion of gracious materials such as amethyst, lapis lazuli, jade, jasper, fire-opal and rose quartz, with Murano glass, mother-of-pearl, silicious metal and mirror fragments.

The standard qualities comprise more than 70 different positions in design, colour and structure. Exclusive special construction qualities for own CI-concepts are also possible with small purchase order quantities.

The raw slabs have formats of 125 x 125 cm and 305 x 140 cm and are available in four different thicknesses. Floor coverings are made from the slabs in standard formats of 30 x 30 to 120 x 120 cm with chamfered edges. Upon request, special finishing is possible with all forms "made to order" with precise measurement and with short delivery time. With the five selectable surface finishes the possible variations are increased up to approximately 5,000 in total.

APPLICATIONS

OBJECT STONE and TOP STONE reflect innovation in stone. Architects, designers, outfitters and planners deem this creative, hard-wearing and long-lasting material as a high-quality solution for commercial project architecture and exclusive living. The possible applications are boundless, whether used as a floor or wall tile, as a skirting board, border trim, stair, window sill, work or table top, counter or bar top covering or as a vanity top in office, hotel, gastronomy, wellness, either industrial or private.

STONE.De GmbH offers competent service: from consultation, planning and project forecasting up to the pre-installation product finishing. All stone elements for your project from a single source. Planning and coordination costs are reduced considerably.

SERVICE

The manuals and sample folders OBJECT STONE and TOP STONE contain all qualities, colours, surfaces, forms of edge finishing, possible applications and technical relevant data.

This is stone pure, with everything at a single glance. Larger samples can be requested at any time and available on short notice.

Customers, architects, interior outfitters, retail and kitchen outfitters all gladly take advantage of the possibilities provided in our showroom in Kassel in order to apply the product world of "Engineered Stone" to the individual project in pleasant atmosphere. An intelligent network of experienced specialists within Germany can support you at any time, on site. For export, we offer support through our specialized team for international activities, direct form the head office in Kassel.
